Ruman Malik

Software Engineer | Full-Stack · ML

Lahore, Pakistan | rumanmlk123@gmail.com | linkedin.com/in/ruman-malik | github.com/rumanmlk

Summary

Software engineer at ExD shipping production demand-forecasting (PythinQ: FastAPI, React, LightGBM, PostgreSQL) and multi-agent LLM systems (Omnix: Django, 4 LLM providers).

Experience

Excellence Delivered (ExD) Mar. 2026 – Present
Associate Software Engineer *Lahore, Pakistan*

PythinQ | *FastAPI, React/TypeScript, Vite, PostgreSQL, LightGBM, Optuna, Docker* *Mar. 2026 – Present*

- Shipped a 4-grain daily demand-forecasting product on ≈5M sales rows so planners upload, train, forecast, and review a calendar-year holdout in one UI.
- Routed models by demand shape: Huber LightGBM globally, a quantile specialist for high-variance Material SKUs, and two-stage occurrence/magnitude models for 10,000+ sparse series; Optuna with 7-fold walk-forward on lag, calendar, event, and weather features.
- Implemented a Medallion PostgreSQL store, viewer/analyst/admin RBAC, and a Postgres-backed async worker so ingest, training, and multi-day forecasts keep running after the HTTP request returns.
- Added predecessor SKU maps that blend history into new packs without merging identities. CI (pytest, Ruff, basedpyright) catches missing weather/events, split-mode errors, and train/serve schema drift before deployment.

Omnix AI | *Django, PostgreSQL, OpenAI, Anthropic, Gemini, xAI* *Jun. 2026 – Present*

- Implemented one LLM routing layer across 4 providers (OpenAI, Anthropic, Gemini, xAI) with primary/fallback pairs and retries, so rate limits or provider outages fail over without aborting the panel.
- Rebuilt panel creation and debate launch as guided wizards, enforcing Super Expert + 3–9 expert rosters and a model assignment for every adviser before a debate can launch.
- Moved debate start/continue, persona generation, and library batch work onto an async worker with per-user job locks so multi-minute runs survive HTTP timeouts.

Core Edge Solutions Dec. 2025 – Feb. 2026
Full Stack Developer (Next.js) *Lahore, Pakistan*

- Built a multi-tenant eCommerce platform with Next.js and PostgreSQL (isolated storefronts/admin on shared infrastructure, plus single-tenant mode) and a pluggable upload layer (local filesystem and MinIO).
- Set up GitHub Actions to build, test, and deploy to the dev environment on every push, with manual promotion to staging/main.

TAG Solutions (TAGS) Sep. 2025 – Oct. 2025
Python Intern *Lahore, Pakistan*

- Built and deployed a full-stack app (React, Node.js, MongoDB Atlas) with Docker and GitHub Actions to Docker Hub and Render; converted Django advertisement-marketplace pages to a Django + React (Vite) hybrid.

Ebryx Jun. 2024 – Sep. 2024
Machine Learning Intern *Lahore, Pakistan*

- Built a DGA (Domain Generation Algorithm) detection system using DeepD2V embeddings on 200,000+ domain records, outperforming n-gram and Word2Vec baselines.

Projects

Rice Quality Check (FYP) | *Computer Vision, FastAPI, React, MongoDB* Aug. 2024 – Apr. 2025

- Built an AI system in a 3-member team to classify 8 Pakistani rice varieties and detect adulteration, reaching 92% average accuracy across 6 fine-tuned models on 10,000+ grain images.

Lexio AI Legal Counsel | *RAG, LangChain, FAISS, Streamlit, Ollama* Feb. 2025 – Apr. 2025

- Built document-grounded legal Q&A: a FAISS RAG pipeline (LangChain, Ollama, Streamlit) answers only from the uploaded file and declines when the answer is not present.

Education

FAST National University of Computer and Emerging Sciences (FAST-NUCES) Lahore, Pakistan
BS Computer Science *Aug. 2021 – Jun. 2025*

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL
Backend: FastAPI, Django, SQLAlchemy, Node.js
Frontend: React, Next.js, Vite, Tailwind CSS
Databases: PostgreSQL, MongoDB
AI / ML: LightGBM, Optuna, pandas, scikit-learn, LangChain, RAG, FAISS
LLM APIs: OpenAI, Anthropic, Gemini, xAI
DevOps: Docker, GitHub Actions, pytest, Ruff, MinIO
